Performance standards for marine radio equipment required by the Merchant Shipping (Radio Installations) Regulations, 2002

TO ALL PRINCIPAL OFFICERS, SURVEYORS, MASTERS AND HOLDERS OF SOUTH AFRICAN GMDSS GENERAL OPERATORS CERTIFICATES, SHIPOWNERS AND RADIO EQUIPMENT SUPPLIERS AND REPAIR FACILITIES

Marine Notice No. 22 of 2002 is cancelled

Summary

This marine notice (a) specifies the performance standards for radio equipment required to be fitted on ships and (b) specifies the manner in which at-sea availability of radio equipment is to be ensured.

This marine notice should be read with the Merchant Shipping (Radio Installations) Regulations, 2002.

2 Regulation 6 (1) requires radio equipment provided under these regulations to comply with certain performance standards specified by the Authority. For the purposes of that provision, the performance standards to be complied with are specified as follows:

(a) Where ships comply with the requirements of Part 2 (GMDSS requirements) of the regulations, the performance standards to be complied with are those adopted by the International Maritime Organisation (IMO) and specified in Annex 1.

(b) Where ships comply with the requirements of Part 3 (Non-GMDSS requirements) of the regulations, the performance standards to be complied with are specified in Annex 2.

3 Regulation 17(6) requires that at-sea availability of radio equipment be ensured in accordance with the requirements specified by the Authority. For the purposes of that provision, the availability of radio equipment on ships making voyages in sea areas A3 and A4 is to be ensured in accordance with IMO Assembly Resolution A.702 (17) as attached as Annex 3.

1 All equipment must comply with the general requirements for shipborne radio equipment forming part of the Global Maritime Distress and Safety System (GMDSS) and for electronic navigational aids, set out in IMO Assembly Resolution A.694(17).
2 Equipment installed on or after 1 January 2001 must comply with IMO Maritime Safety Committee Resolution MSC.68(68), Annex 1.
3 Equipment installed on or after 1 January 2001 must comply with IMO Maritime Safety Committee Resolution MSC.68(68), Annex 2.
4 Equipment installed on or after 1 January 2001 must comply with IMO Maritime Safety Committee Resolution MSC.68(68), Annex 3.
5 Float-free release and activation arrangements for emergency radio equipment must comply with IMO Assembly Resolution A.662(16).
6 Equipment installed before 4 November 1994 may comply with IMO Assembly Resolution A.695(17).
7 Equipment installed on or after 1 January 2001 must comply with IMO Maritime Safety Committee Resolution MSC.68 (68), Annex 4.

<sup>8</sup> Applicable to shipborne GPS receiver equipment, where this equipment is integrated into or linked to the radio equipment.
ANNEX 2

PERFORMANCE STANDARDS FOR NON-GMDSS EQUIPMENT

VHF radiotelephone installation

1 A VHF installation provided in ships must comply with the performance standards set out in IMO Assembly Resolution A.385(X).

Radiotelephone installation

2 (a) Radiotelephone transmitters and receivers must comply with the performance standards set out in IMO Assembly Resolution A.334(IX). Also refer to Marine Notice No.14 of 2007.

(b) Radiotelephone alarm signal generating devices must comply with the following requirements:
   (i) the tolerance of the frequency of each tone must be " 1,5 per cent;
   (ii) the tolerance on the duration of each tone must be " 50 milliseconds;
   (iii) the interval between successive tones must not exceed 50 milliseconds;
   (iv) the ratio of the amplitude of the stronger tone to that of the weaker must be within the range 1 to 1,2.

(c) Narrow-band direct-printing telegraph equipment for the reception of navigational and meteorological warnings and urgent information to ships (NAVTEX) must comply with the performance standards set out in IMO MSC Resolution. 148(77)

Radio life-saving equipment

3 Survival craft two-way VHF radiotelephone apparatus must comply with the performance standards set out in the appropriate IMO Assembly Resolution specified in item 13 of the table in Annex 1.

4 Survival craft radar transponders for use in search and rescue operations must comply with the performance standards set out in the IMO Assembly Resolution specified in item 8 of the table in Annex 1.
ANNEX 3

RESOLUTION A.702(17)

adopted on 6 November 1991

RADIO MAINTENANCE GUIDELINES FOR THE GLOBAL MARITIME DISTRESS AND SAFETY SYSTEM (GMDSS) RELATED TO SEA AREAS A3 AND A4

( SOLAS Reg IV/15.7 )

THE ASSEMBLY,

RECALLING Article 15(j) of the Convention on the International Maritime Organization concerning the functions of the Assembly in relation to regulations and guidelines concerning maritime safety,

NOTING regulation IV/15, Maintenance requirements, of the International Convention for the Safety of Life at Sea, 1974 (SOLAS), as amended by the 1988 GMDSS Conference, and in particular regulation IV/15.7 concerning the methods of ensuring the availability of the functional requirements specified in regulation IV/4, for distress and safety purposes on ships engaged on voyages in sea areas A3 and A4,

NOTING ALSO resolution 5 of the 1988 GMDSS Conference which requests the Maritime Safety Committee to periodically review the requirements of regulation IV/15.7 in the light of experience gained,

HAVING CONSIDERED the recommendation made by the Maritime Safety Committee at its fifty-ninth session,

1. ADOPTS the Guidelines for Ensuring the Availability of Radio Equipment for Ships Engaged on Voyages in Sea Areas A3 and A4 Required by Regulation IV/15.7 of the 1974 SOLAS Convention, as Amended in 1988, set out in the annex to the present resolution:

2. RECOMMENDS that Governments, in applying regulation IV/15.7 to ships, take account of the annexed Guidelines;

3. REQUESTS the Maritime Safety Committee, when periodically reviewing the requirements of regulation IV/15.7, also to review and update the Guidelines as appropriate and to report as necessary to the Assembly.
Annex

GUIDELINES FOR ENSURING THE AVAILABILITY OF RADIO EQUIPMENT FOR SHIPS ENGAGED ON VOYAGES IN SEA AREAS A3 AND A4 REQUIRED BY REGULATION IV/15.7 OF THE 1974 SOLAS CONVENTION, AS AMENDED IN 1988

1 BASIC REQUIREMENT FOR ENSURING AVAILABILITY

1.1 Irrespective of the methods used to ensure the availability of the functional requirements specified in regulation IV/4, and as specified in regulation IV/15.8, a ship should not depart from any port unless and until the ship is capable of performing all distress and safety functions, as set out in regulation IV/4.

1.2 Irrespective of the methods used by the ship, all manufacturers' instruction manuals and maintenance manuals for each piece of equipment required and installed should be available on board. Adequate tools, spare parts and test equipment appropriate to the methods used by the ship, as specified by the Administration, should be provided. The manuals, tools, spare parts and test equipment, as applicable, should be readily accessible.

2 DUPLICATION OF EQUIPMENT FOR ENSURING AVAILABILITY

2.1 If availability is ensured by using a combination of methods which includes duplication of equipment, in addition to the radio installations required by regulations IV/7, IV/10 and IV/11, as appropriate, the following radio installations complying with regulation IV/14 should be available on board ships engaged on voyages in:

1. sea area A3 - a VHF radio installation complying with the requirements of regulation IV/7.1.1 and either an MF/HF radio installation complying with the requirements of regulation IV/10.2.1 and being able to comply fully with the watch requirements of IV/12.1.3 or an INMARSAT ship earth station (SES) complying with the requirements of regulation IV/10.11. The MF/HF installation or INMARSAT SES installed for duplication should also comply with regulation IV/10.3;

2. sea areas A3 and A4 - a VHF radio installation complying with the requirements of regulation IV/7.1.1 and an MF/HF radio installation complying with the requirements of regulation IV/10.2.1 and being able to comply fully with the watch requirements of IV/12.1.3. Ships operating in sea area A4 only occasionally and having originally installed an MF/HF radio installation, may, instead of the additional MF/HF radio installation, install an INMARSAT SES complying with the requirements of regulation IV/10.1.1. The MF/HF radio installation or INMARSAT SES installed for duplication should also comply with regulation IV/10.3.

2.2 The additional radio installations specified in 2.1.1 and 2.1.2 of these Guidelines should each be connected to a separate antenna and be installed and ready for immediate operation.

2.3 It should be possible to connect the additional radio installations specified in 2.1.1 and 2.1.2 (hereinafter referred to as duplicated equipment) to the reserve source or sources of energy required by regulation IV/13.2, in addition to the appropriate radio equipment.
specified in that regulation (hereinafter referred to as basic equipment). The capacity of the reserve source or sources of energy should be sufficient to operate the particular installation (i.e. the basic equipment or the duplicated equipment) with the highest power consumption, for the appropriate period specified in regulation IV/13.2.1 to IV/13.2.3. However, the arrangement for the reserve source or sources of energy should be such that a single fault in this arrangement should not be able to affect both the basic and the duplicated equipment.

3 SHORE-BASED MAINTENANCE FOR ENSURING AVAILABILITY

3.1 If availability is ensured by using a combination of methods which includes shore-based maintenance, an arrangement acceptable to the Administration should be established to ensure adequate support of the ship for the maintenance and repair of its radio installations. For example, the following arrangements, among others, may be suitable:

1. an agreement with a company known to cover the trading area of the ship to provide maintenance and repair facilities on a call-out basis;
2. provision of facilities at the main base of ships engaged on a regular trading pattern. Records of Equipment (Form P, R or C) should include an indication of the types of arrangements for shore-based maintenance.

3.2 It should be recognized that, despite the use of other methods, some reliance on shore-based maintenance to ensure the availability of the functional requirements of the GMDSS will always be necessary.

4 AT-SEA ELECTRONIC MAINTENANCE CAPABILITY FOR ENSURING AVAILABILITY

4.1 If availability is ensured by using a combination of methods which includes at-sea electronic maintenance capability, adequate additional technical documentation, tools, test equipment and spare parts must be carried on board in order to enable the maintainer to perform tests and localize and repair faults in the radio equipment. The extent of this additional technical documentation, tools, measuring equipment and spare parts to be carried on board should be consistent with the equipment installed and should be approved by the Administration. An indication of such approval should be entered in the Records of Equipment (Form P, R or C).

4.2 The person designated to perform functions for at-sea electronic maintenance should either hold an appropriate certificate as specified by the Radio Regulations, as required, or have equivalent at-sea electronic maintenance qualifications, as may be approved by the Administration, taking into account the recommendations* of the Organization on the training of such personnel.

* Refer to Assembly resolution A.703(17), "Training of radio personnel in the global maritime distress and safety system (GMDSS)"
